

## Selection and sizing according to DIN 808 with plain/needle bearing

### Selection of type G, GD, GA, GR (max. 1000 rpm) <sup>1)</sup>

The selection of precision joints with plain bearing is based on the driving torque considering a correction factor which depends on the diffraction angle  $\alpha$  and the operating speed.

For extendable joints the overall length and the speed need to be additionally considered for sizing (please consult with KTR).

$$\text{Driving torque } M_t \text{ [Nm]} = 9550 \cdot \frac{\text{Power [kW]}}{\text{Speed [rpm]}}$$

$$\text{Torque selected } T \text{ [Nm]} = \text{driving torque} \cdot \text{correction factor}$$

Additional review:

$$^1) \text{ Diffraction angle } [^\circ] \cdot \text{speed [rpm]} \leq 40,000$$

Diffraction angle $\alpha$	5°	10°	15°	20°	25°	30°	35°	40°	45°
Correction factor	0.8	1.00	1.25	1.5	1.8	2.2	2.6	3.3	4.0

Details given:

Driving torque  $M_t$  63 Nm  
 Diffraction angle 30° → Correction factor for diffraction angle 2.2  
 Operating speed 400 rpm

$$\text{Torque selected } T \text{ [Nm]} = 63 \text{ Nm} \cdot 2.2 \rightarrow 138.6 \text{ Nm}$$

Selection based on table: [joint size 6](#)

# KTR Precision joints type G and GD

According to DIN 808 with plain bearing
